Is Kamagra Gold 100 mg safe to use?

Autor: jalisaanthony - 2026/09/18 11:40

_____

Kamagra Gold 100 mg contains sildenafil and is prescribed for erectile dysfunction. Whether it is safe depends on your individual health, medical history, and other medicines you may be taking.

Common side effects can include headache, flushing, indigestion, dizziness, and visual changes. It should not be taken with nitrate medicines used for chest pain, as this combination can cause a dangerous drop in blood pressure. People with certain heart, liver, kidney, or blood-pressure conditions should consult a doctor before using it.

For your safety, use sildenafil only as directed by a qualified healthcare professional and obtain medicines from a legitimate, licensed source. If you experience chest pain, severe dizziness, sudden vision loss, or an erection lasting more than four hours, seek urgent medical attention.
